At the nexus of cutting-edge technology and efficiency, RIVA Solutions recognizes and deeply appreciates the unique IT vision of the USPTO OCIO, encapsulated in the transformative concept of New Ways of Working, and how that vision can be brought to bear in the delivery of USPTO digital products. We are committed to product-oriented development, fostering the seamless integration of Agile Delivery, DevSecOps, Product Management, and Human-Centered Design. This is achieved by leveraging the capabilities of the Software Factory model, a reflection of our decades-long experience in providing mission-critical support at USPTO. RIVA is the partner to help bridge USPTO's current IT landscape to its envisioned future, we are ready to help modernize, and transform your Product Lines, ensuring continuity while enabling change to enhance the customer experience.

Our team, composed of highly qualified and certified professionals, brings to the table a wealth of experience in creating microservice-based, decoupled, API-forward, and cloud-native solutions. In the rapidly evolving field of digital product delivery, we recognize the importance of continuous learning, and we understand mastery is an ongoing journey. We combine seasoned resources and vast USPTO experience along with team members who bring a wealth of innovative solutions from other groundbreaking agencies and programs (such as Department of Defense Platform One). This winning combination allows us to tackle USPTO's most difficult problems. Team RIVA doesn't just possess the enterprise system knowledge required to tackle these issues, but we also provide a fresh perspective that can categorically change the agency's technological fortitude.

Together lets transform outputs into outcomes and strategy into reality.
